

LIVING SOIL PROFILE :

Students learn how soil is formed, that soils come in different types, and that there are layers underground. The program has a basic introduction of soils, followed by 3 different learning stations. Students make a hands-on soil smudge, rub rocks to make soils, and learn about the different layers of topsoil, subsoil and bedrock as they color in a soil profile. (Grades 2nd and up, 40 minutes to 1 hr.)
